Recap

What have I recently accomplished during this sprint?

What obstacles/struggles did I encounter during this sprint?

1.

2.

Possible solutions to my struggles:

1.

2.

3.

Final thoughts:

*Livistona
undifolia*

all along the way they
to be a great deal with you
the journey and everything
along the way of being to be you
the journey and everything
you are here
for the journey the
post-
card

Notice that the tag name in the structure specifier can be removed, as there, if no more variables of that structure type will be defined. Merging the structure specification and definition this way is a shorthand approach that can save a few program lines. Generally, it is less clear and less flexible than using separate specifications and definitions.

Initializing Structure Members

The next example shows how structure members can be initialized. The structure is defined, it is demonstrated that you can have more than one structure of the same type, and you can initialize them (along).

```
int main()
{
    struct part
    {
        int partnum;
        float cost;
    };
    struct part part1, part2;
    part1.partnum = 1;
    part1.cost = 124.5;
    part2.partnum = 2;
    part2.cost = 17.55;
    return 0;
}
```

```
void main()
{
    struct part
    {
        int partnum;
        float cost;
    };
    struct part part1, part2;
    part1.partnum = 1;
    part1.cost = 124.5;
    part2.partnum = 2;
    part2.cost = 17.55;
    return 0;
}
```

```
part2 = part1;
cout << "Model " << part1.modelnumber;
cout << "costs $" << part1.cost;
cout << "Model " << part2.modelnumber;
cout << "costs $" << part2.cost;
```

his program defines two variables of type `part`: `part1` and `part2`. It initializes `part1`, prints out the values of its members, assigns `part1` to `part2`, and prints out its members. Here's the output:

Model 6244, part1 costs \$217.55
Model 6244, part2 costs \$217.55

Not surprising, the same output is repeated, since one variable is made equal to the other.

ORIENTED PROGRAMMING?

Object oriented programming was developed because limitations were discovered in earlier architectures. To appreciate what OOP does, we need to understand what it is. In the early days of programming languages, the programmer had to manage the memory and the execution flow of the program. This was often done by using a series of instructions that the computer would execute in a specific order. This is the essence of procedural programming.

Procedural Programming

Procedural programming languages like Pascal, C, and FORTRAN are designed to be executed in a linear fashion. The programmer writes a sequence of instructions that the computer follows to perform a task. This is often done by using a series of instructions that the computer would execute in a specific order. This is the essence of procedural programming. In procedural programming, the programmer creates a series of instructions that the computer executes in a specific order. This is often done by using a series of instructions that the computer would execute in a specific order. This is the essence of procedural programming.

Nearly all men can stand adversity, but if you want to test a man's
character, give him power. —Abraham Lincoln

31. Those who stand for nothing fall for anything.

—Alex Hamilton

32. Before you judge me, I'd like to know you. Before you ask, have you seen my childhood?

—Michael Jackson : *Childhood* (1995 song)

33. You can tell about a man's character by his way of eating.
—Ronald Reagan

34. A great command and good taste mean thereby
a man without originality or moral courage.

—George Bernard Shaw

35. Sound character provides the power with which a person may ride
the emergencies of life instead of being overwhelmed by them.

—Og Mandino

36. If you can trust yourself when all men doubt you,
But neither wanting for their doubting too;
If you can keep your head and not be tired by waiting,
Or, being lied about, don't deal in lies,
Or being hated, don't give way to hating,
Or don't look too good, nor talk too wise.

—Rudyard Kipling : *If ...* (1910)

37. God is father of the Man. —William Wordsworth

Charity (see also **Giving and Helping others, Goodness**)

The poor need charity more than the dead. —George Bernard Shaw

Every charitable act is a stepping stone toward heaven.

—Henry Ward Beecher

Charity begins at home, is the voice of the world.

—John Brown

With malice toward none, with charity

—Abraham Lincoln

Recap

What have I learned about myself and my business?

What obstacles/struggles did I encounter during the process?

Possible solutions and suggestions:

(1) Converting Weaknesses to Strengths

A water-bearer had two large pots, each hanging on the ends of the pole which he carried over his shoulders. One of the pots had a small flaw in it through which the water seeped out. The other pot was perfect and always delivered a full portion of water. At the end of the long walk from the river to the water bearer's house, the cracked pot arrived only half full.

The pot was ashamed of its imperfection. It felt miserable about being able to accomplish only half its function.

One day it spoke to the water bearer. "I am ashamed of myself and am only able to go half my journey."

"Why?" asked the water bearer. "What are you ashamed of?"

"I have delivered only half my load. This crack in my side causes water to leak out," the pot said.

The water bearer spoke to the pot. "Did you notice that there are flowers on your side of the pole but not on the other side? That is because I have always known about your flaw and have taken advantage of it. I planted flower seeds on your side and everyday while we walk back from the stream, I water them. For two years, I have been able to pick these beautiful flowers to sell at the market."

Each of us has our unique flaws. We're all cracked pots. But in this

drooping. That cup of tea made was supposed to get me glorious grades.

The results were monumental.

I secured more than enough marks to easily get admission into an engineering college ranked best from the bottom. Besides, I became allergic to tea. Just saying the word 'tea' would churn my stomach and give me an instant headache and make me lose all my appetite. I never found good to me.

I gave up on tea entirely for the next three years. Spare me if I don't take risks in my life.

In the past few years, tea has become a boom in India. The *Start-up India* foundation has done extensive research and tabled a critical thesis. If Indians sipped good tea, all other national problems would resolve themselves automatically. We won't even need a Prime Minister.

Kill me later but today I will speak the truth. Most of these *Amrutis* can't really taste the tea leaves. I seldom find a 'fancy' or 'premium' chai'. Also, after the news that some tea makers use harmful chemicals to make their tea irresistible, I utterly loathe chain in these tea chains.

Tea is another worldly ritual that doesn't register well in my brain. Why do we continue to give injustice to the tea by eating cookies and biscuits that grossly distorts the taste of tea. A good *Parle-G* tastes perfect with tea. We eat it with the biscuits because of their malfunction when paired with tea. It is the rightful wife to tea. But tea is so self-sufficient that it doesn't need a wife.

LESSON

Present Tense

The Present Tense

He does, You do, I do,

[নিজ, তুমি, আমি কর]

যে সব কাজ বর্তমান বর্তমান কালে হয় তাহা বর্তমান verb-এর

present tense হয়—

পাখা গিয়ে যান—Father goes to office.

মা আমাদের খাবার রাঁধেন—Mother cooks our food.

তিনি জানতে পারেন—He knows how to swim.

তোমরা খুব আগ্রহী কর কেন—Why are you so much interested?

তাহার একটি মোটর কার্ট আছে—He has a nice car.

আমাদের সত্য তাহা এবং অসত্য বঝা এই tense form ব্যবহৃত হইতে পারে—

আমি প্রতিদিন ব্যায়াম করি—I take exercise everyday.

পৃথিবী সূর্যের চারিদিকে ঘুরে—The earth moves round the sun.

ভবিষ্যৎ আশংকা কখন কখন ব্যবহৃত হয়—

আমি সন্ধ্যায় কলিকাতা রওনা হইব—I leave for Calcutta in the evening.
